Do You Want Microsoft Outlook Functions On Your Mobile Phone...?

We have all been using mobile phones for years now and many of us in the business community have started to use Blackberry devices for email on the move.

People are constantly in and out of the office. They want to consolidate and use One Simple Device that will cover all the options and keep them up to speed with phone calls, emails, calendar events etc.

"Let's have the functionality of the office on our mobile phones"

PaqIT Solutions, working in conjunction with all the main mobile phone operators & Microsoft Small Business Server, can quickly 'Bring It All Together' and make life easy for your staff while on the move.

Your life in the palm of your hand
What you want, when you want.

Outlook Email	**Office Mobile**	**Contacts**	**Internet Explorer**
Your inbox just the way you like it.Outlook looks and feels just like it does on your PC.	With Mobile Editions of Word, Excel and PowerPoint, that flash of inspiration won't be lost. You'll always be ready with Office Mobile.	Synchronise family, friends and clients to your Windows Mobile handset and you'll be able to email, phone, even video call them. This is true mobile connectivity.	The Internet at your fingertips. Use Windows Live Search to find the location of your meeting, or where you're going this evening.

In addition to all the normal mobile phone functions that we use every day, you can now;

- Have your email instantly pushed out to your phone.
- Review, reply to and create new emails from your phone as if you were working from your office.
- Unlike Blackberry, **EVERYTHING** you did on the phone while you were out will automatically be updated on your office PC when you get back. *Emails you sent while you were out will be in Sent Items on your PC – Messages read will be marked as read on your PC etc.*
- Unlike Blackberry, nominated staff can enter appointments to your office-shared calendar and they will instantly appear on your phone so you will never miss a meeting or forget to do something...
