

Full Endpoint Web Protection

Complete web protection everywhere you go

The web is the number one source of malware such as FakeAV. And the threats are getting worse every day. As you probably know, keeping your offsite users safe and productive on the web is a major pain. It's a large investment, complex to deploy, and fraught with annoyances.

Our new full Web Protection License eliminates these costs and complexities by solving your web protection needs in a whole new way. We've taken what's traditionally been done at the gateway, and put it on your endpoint computers. You get full user-based policy and productivity control that works in the office, at home or on the road – wherever your users go. And it's incredibly simple.

Gone are the days of backhauling, major hardware rollouts, uptime management and “weekend infections”. This new product doesn't require you to compromise anything you have today. In fact, it eliminates hidden compromises we've all been living with for the last 10 years.

Web threat protection - everywhere

We've integrated our latest cross-browser web filtering technologies into our Endpoint agent. They seamlessly block all the latest threats and stop malware downloads wherever your users go.

Full user-based productivity policy

Set user-based policy by site category and file types with just a few clicks. Trust a powerful content engine that doesn't rely on file extensions to make its decisions. Need custom policies? No problem, we do that too.

Real-time insights and rich reporting

User policy updates and reporting behave as if every machine was inside the network without the need for poking holes in your firewall. Policy updates are immediate and web activity reporting is near real time so you can manage your organization without compromise.

Eliminate cost and complexity

Doing web filtering at the endpoint means you can eliminate traffic backhauling, retire gateway hardware and forget about scalability problems. Maybe it's time to retire the “big iron”.

Easy to deploy

There's no additional client software required – it's all part of our endpoint agent. With just a few easy clicks you have complete web protection at the endpoint - everywhere.

Get instant insights and easily set active web policies wherever your Endpoints are

Works together with our web appliances
